Data Management: Data Analysis and Interpretation Training

ProSidian Consulting Training & Knowledge Management Solutions

LEARNING IS EVOLVING. Leading organizations look for ways to maximize learning effectiveness by placing training and knowledge management initiatives in context with the needs of individual and group development. Learning has become the connective tissue between the organization's mission and those charged with carrying it forward. This connected learning motivates employees and aligns their needs with organizational initiatives. From a single course to an integrated multi-subject training pathway, we provide resources for training, coaching and knowledge management while enhancing your organization's reputation, performance, and bottom line. Learn more about our solution for Data Management: Data Analysis and Interpretation Training: *INVEST | EMPOWER | DELIVER*.

Training Category

Special Programs - Technology Issues: With new technologies surfacing constantly, identifying the technology that best suits the needs of an organization is critical. ProSidian technology training services offer comprehensive training programs on a variety of administrative systems and desktop applications.   We support private companies and government agencies of all sizes with technology training delivered as on-site technology training, train-the-trainer sessions, and provided training materials. ProSidian can supplement technical training with topics like cyber-etiquette to enhance technical skills and provide additional value.

Expected Training Outcome

Through ProSidian training on Data Management, each participant will gain an understanding/knowledge of topics which can be applied to their working environment to improve performance outcomes by applying concepts learned. The desired outcome is the achievement of a skillset by the participant that enables them to apply knowledge learned to manage data securely and effectively to perform work tasks, analysis and presentation while being able to impart newly realized knowledge on subordinates, peers, and throughout cross functional work teams in order to improve performance outcomes. This training enables participants to leverage knowledge to improve microsystems and embed quality and efficiency into all work.

What You Will Cover

Data - General Considerations, Data Management Concepts and Techniques, Data Analysis and Interpretation, and Data Reporting and Dissemination
